“Our second quarter results were excellent, with organic growth improving across the board, which was bolstered by the macroeconomic environment of higher fuel prices and favorable foreign exchange rates,” said Charles Freund, chief financial officer, FLEETCOR Technologies, Inc. “We’ve continued to manage expenses in line with revenues, and are experiencing strong credit performance. Our active share repurchase program was increased by \$1 billion by the Board on July 27, 2021, and we now have \$1.6 billion of repurchase capacity.”

### **Fiscal-Year 2021 Outlook:**

We currently expect continued recovery of volumes from COVID levels for the remainder of the year and the benefit of the acceleration of new sales to continue to drive momentum in the second half of 2021,” concluded Freund.

### **About Non-GAAP Financial Measures:**

This press release includes non-GAAP financial measures, which are used by the Company as supplemental measures to evaluate its overall operating performance. The Company's definitions of the non-GAAP financial measures used herein may differ from similarly titled measures used by others, including within its industry. By providing these non-GAAP financial measures, together with reconciliations to the most directly comparable GAAP financial measures, we believe we are enhancing investors' understanding of our business and our results of operations, as well as assisting investors in evaluating how well we are executing strategic initiatives. See the appendix for additional information regarding these non-GAAP financial measures and a reconciliation to the most directly comparable GAAP measure.

Adjusted net income is calculated as net income, adjusted to eliminate (a) non-cash stock based compensation expense related to share based compensation awards, (b) amortization of deferred financing costs, discounts, intangible assets, and amortization of the premium recognized on the purchase of receivables, (c) integration and deal related costs, and (d) other non-recurring items, including unusual credit losses occurring largely, but not necessarily exclusively, due to COVID-19, the impact of discrete tax items, impairment charges, asset write-offs, restructuring costs, gains due to disposition of assets/businesses, loss on extinguishment of debt, and legal settlements. We calculate adjusted net income and adjusted net income per diluted share to eliminate the effect of items that we do not consider indicative of our core operating performance.

Adjusted net income and adjusted net income per diluted share are supplemental measures of operating performance that do not represent and should not be considered as an alternative to net income, net income per diluted share or cash flow from operations, as determined by U.S. generally accepted accounting principles, or U.S. GAAP. We believe it is useful to exclude non-cash share-based compensation expense from adjusted net income because non-cash equity grants made at a certain price and point in time do not necessarily reflect how our business is performing at any particular time and share based compensation expense is not a key measure of our core operating performance. We also believe that amortization expense can vary substantially from company to company and from period to period depending upon their financing and accounting methods, the fair value and average expected life of their acquired intangible assets, their capital structures and the method by which their assets were acquired; therefore, we have excluded amortization expense from our adjusted net income. Integration and deal related costs represent business acquisition transaction costs, professional services fees, short-term retention bonuses and system migration costs, etc., that are not indicative of the performance of the underlying business. We also believe that certain expenses and recoveries (e.g. legal settlements, write-off of customer receivable, etc.), gains and losses on investments, and impairment charges do not necessarily reflect how our investments and business are performing. We adjust net income for the tax effect of each of these non-tax items.

Organic revenue growth is calculated as revenue growth in the current period adjusted for the impact of changes in the macroeconomic environment (to include fuel price, fuel price spreads and changes in foreign exchange rates) over revenue in the comparable prior period adjusted to include or remove the impact of acquisitions and/or divestitures and non-recurring items that have occurred subsequent to that period. We believe that organic revenue growth on a macro-neutral, one-time item, and consistent acquisition/divestiture/non-recurring item basis is useful to investors for understanding the performance of FLEETCOR.

Management uses adjusted net income, adjusted net income per diluted share and organic revenue growth:

- as measurements of operating performance because they assist us in comparing our operating performance on a consistent basis;
- for planning purposes, including the preparation of our internal annual operating budget;
- to allocate resources to enhance the financial performance of our business; and
- to evaluate the performance and effectiveness of our operational strategies.
